Leading petroleum economist Dr. Pedro van Meurs will share his forecast on carbon neutrality targets and the place of petroleum industry in a carbon-neutral world. Dr. Van Meurs will present his analysis of the impact of the energy transition in the coming decades to 2070, concluding that a petroleum industry of considerable size will continue, focusing on producing clean oil and gas supplies for petrochemical and other purposes, and how initiatives to terminate awards of petroleum rights are misguided. He will describe fourteen methodologies to attain clean oil and gas supplies, and the fundamental need for profound changes to the structure of fiscal terms, the level of government takes and other major legislative and regulatory reform to attain clean petroleum, eliminate Scope 1, Scope 2 and Scope 3 emissions and turn petroleum production and consumption into a carbon negative activity.
